

Cashmatic

SelfPay
Family

A family of cash payment machines
that automates management at the
checkout point.

Cashmatic reinvents the
payment process.

Cash payments are still common in businesses open to the public. Shops of all kinds, bars, restaurants, hotels, always have clientele loyal to the use of coins and banknotes.

However, cash payments carry all kinds of risks: From the human ones in counting change to legal ones, linked to counterfeit money in circulation. Not to mention the issue of hygiene: passing cash from hand to hand and pocket to pocket certainly does not make banknotes especially clean.

Cashmatic has created a line of products that eliminates each of these problems.

The SelfPay line, a family of devices in which customers insert money and get the change they are owed, without the possibility of errors or wasting customers' time.

With SelfPay, cash is validated with instant monitoring, intercepting counterfeit money.

Cash reporting is automatic, and therefore easily measured and monitored, in real time and remotely.

With SelfPay devices, collection transactions are recorded automatically at management level, without the need for manual entries.

Integration with the main management systems on the market allows for comprehensive customisation and scalability of software functions.

The SelfPay family includes multiple solutions designed to meet the performance and economic needs of businesses in a wide variety of sectors and for every budget.

safety
reliability
speed
versatility and compactness
safeguarding hygiene

Why choose Cashmatic?

Choosing Cashmatic SelfPay for your retail outlet means transforming your business's entire payment process, making it reliable, easy, fast and hygienic.

Complete control through real-time web and mobile notifications

- Certified integration with more than 450 software packages;
- Customisation and scalability of features.

Ensuring a greater level of security against robbery and counterfeit money

- 2 mm thick steel frame;
- Bracket for anchoring to the counter;
- Access control via electronic lock.
- ECB (European Central Bank) device certification for the detection of counterfeit money always visible.

Removal of change counting errors and cash shortages

- Counting and automatic dispensing of change;
- Account balance and account closure in one click.
- Auto-fill function;
- Real-time communication of withdrawal and collection operations.

Greater hygiene in the service offered at the point of sale

- No contact between operator and money;
- Compliance with the European H.A.C.C.P. regulations;
- Cash transactions independent from operator activities.

Less accounting, more time to
grow your business.

Cashmatic products are configurable solutions that are set apart by their ability to adapt to the most varied needs of each Customer.

Our offer also includes an accurate consultancy service to help Customers choose the best configuration, evaluating every aspect from specific functional to performance and experiential requirements.

The **VisualPay** line lets you create a *Self* workstation capable of replicating the functions of an operator, monitoring performance and reliability, with the possibility of associating a SelfPay automatic checkout machines and thus composing a workstation capable of managing both electronic and cash payments in a single structure.

The wide range of software solutions on the market with which Cashmatic products are integrated and the high level of communication protocols implemented ensure total management of cash operations: from the control of receipts, change, cash funds to the guarantee of a unique shopping experience offered to the public.

Modular solutions
to meet all needs

The Cashmatic Software Suite is the technological heart of our SelfPay automatic checkout machines, designed and developed to integrate seamlessly into any digital ecosystem. The Suite consists of software services with a simple and intuitive interface, aimed at both end customers and the operators with specific features to ensure complete control and efficient management of one or more cash points.

In a world where digitisation is at the heart of innovation, our Suite is at the forefront of cash management ecosystems, making every operation safer and more efficient. Central to the development is the *MyCashmatic* application dedicated to control.

In addition, Cashmatic offers powerful API integration to allow Software Houses to take full advantage of all Suite features, thus ensuring a unique and fully customisable experience.

The Benefits of Digitalising Money Cash with Cashmatic Solutions
